

Elmeg CS410 (Up0)

ISDN System telephony for the professional user

High specification system phone giving full integration with the ICT PABX through two wire cabling. With the option to include an individual answering machine module to every CS410, providing up to 48 minutes recording time, full CTI integration through the USB port, jacks for audio-in/audio-out permit easy configuration

and use of announcements, ringing tones, intercom calls or editing of calls at your PC

Cascade up to three T400 key expansion modules to the CS410 – giving you up to a total of 65 programmable function keys, for example with 130 directly accessible direct dial numbers.

An internal telephone directory can hold up to 250 entries with name and additional individual contact information. Freely edit this information and have it displayed for incoming calls. The CS410 also provides alphanumeric access to the central PABX system telephone directory

Optimum support of different models of headsets through an RJ11 socket including support of special functions such as direct control of cordless DECT headsets (without mechanical hook switch), or control of the LED busy signal indicator (e.g. with Plantronics "Firefly", or Silicomp "Orbit NC") is provided straight from the factory.

Greatest user convenience is guaranteed by the 7-line illuminated graphic display, 7 softkeys for user prompting and 5 freely programmable function keys (2 levels) with two-color LEDs.
