

Easymail Web

EasyMail Web is a stand-alone Automatic Attendant / IVR and Voice Mail solution offering up to 999 mailboxes and 4.5 hours recording time. The Easymailweb is multilingual, and can deliver multiple messages and notification in a variety of methods; Including multiple personal greeting messages. In short a professional voice

mail system, with features that give the EasyMail Web the edge over its competitors in the same price bracket.

How many VM entry solutions do you know that include as standard:

- Unified messaging feature
- Message update by e-mail
- Web based mailbox management
- Remote maintenance via Internet

Unified Messaging Feature

Unifies your voice and e-mail messages in one application. When travelling just connect your PC to the office to download your e-mail and voice messages together. Just double click the attached file and the message will play on any multimedia PC.

Message update by e-mail

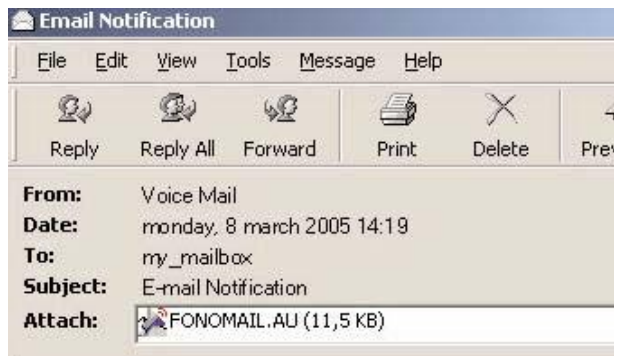

Ideal for multi branch organizations with the need to maintain a corporate image. Play music-on-hold or publicity and greeting messages and conveniently updated in all branches simultaneously, by sending just one e-mail.

Web based Mailbox Management

Forget about deleting messages one by one or wasting time listening to all stored messages before finding the one you need. Web based mailbox management allows you to conveniently manage stored messages, on screen, at anytime and from anyplace via the Internet.

Remote maintenance via Internet

Perform remote configuration and troubleshooting from your own premises via Internet, without the headache of faulty modems, miss configured lines.
