- Fixed function keys for important features

elmeg S530

The hybrid system telephone for demanding users

The elmeg S530 is a high-end system telephone for use with hybrid systems. Equipped with a flexible Up0/S0 interface, a 4-line graphic display, and 15 programmable function keys, the S530 can accept up to three T500 key expansion modules.

Product description

The new S530 system telephone was designed for employees at individual workstations and team members with advanced communications requirements. The 4-line, backlit, adjustable-angle graphic display with its two softkeys gives users quick access to features such as internal telephone directory search, call routing management, and more. The 15 programmable function keys let staff dial their co-workers directly with just the press of a button while the corresponding LEDs clearly display the status of the respective extensions. These keys can also be set up for frequently-used features. In this case, the LEDs display the status of the respective feature. Each key can be programmed for two separate functions and is equipped with 2 colour LEDs. Up to three T500 key expansion modules can provide the S530 with 90 additional keys for a total of 105 function keys. The new ergonomic design incorporates a four-way controller and four fixed function keys including headset and redial buttons, giving users quick and direct access to frequently used features. The elmeg S530 and S560 telephones provide tight integration with elmeg hybrid systems. The hybrid system allows software updates and configurations to be performed centrally — settings no longer need to be made on individual telephones.

A novel connectivity approach ensures exceptional flexibility — both S0 and Up0 interfaces are supported. The same terminals can be used for both two and four-wire cabling. We've even got the next desk over covered — the S530 has a dedicated S0 jack an additional terminal can be connected to.

Features elmeg S530

• General

- System telephone for the hybrid family
- Combination S / U interface
