

Elmeg T484 Compact PBX

BUNDLE OFFER: T484 PBX with 2 Line Analogue Trunk Card only £POA

The T484 closes the gap between compact and modular systems in the Elmeg telephony systems portfolio. An expandable system that unifies well-known functions but includes new features in the form of individual voice mail boxes and voice applications using a CF card. Thanks to its modular approach the T484 can be designed precisely to your specifications.

The T484 is enabled for Voice over IP and can be connected directly to a SIP provider using the 4 DSP module. The basic model offers eight a/b ports, expandable to twelve ports with the various module slots playing a key role in the T484 expansion concept. A slot is provided for expansion with digital and analogue trunks. Another slot accommodates the Elmeg 4 DSP module allowing analogue and ISDN telephones to be directly connected via a SIP provider for VoIP telephony. It is also possible to connect directly IP telephones. In addition, a plug-in slot for CF memory cards is easily accessible and enables a wide range of voice applications

voice over ip
